

Sianty: Powering the Digital Transformation of Auto Workshops Worldwide

In an era where technology is reshaping every industry, the automotive repair sector has often lagged behind. Paper job cards, handwritten estimates, and disconnected spreadsheets have been the norm for decades—a reality that costs shops time, money, and customers. Sianty was founded to change that.

Since its launch in 2020, Sianty has grown from a bold vision into a comprehensive technology platform that serves thousands of auto repair shops across the globe. Headquartered in Dubai, with operations extending across the UAE and beyond, the company is on a mission to empower auto workshops with an all-in-one solution that digitizes and simplifies every part of garage operations.

Our Mission and Vision

Sianty's mission is clear: to empower auto workshops globally with an integrated platform that handles everything from appointment scheduling and inventory management to invoicing and customer relationship management. The company envisions becoming the most innovative and customer-centric garage management software provider, helping garages of all sizes thrive in a digital-first world.

"We developed this software to tackle the most common pain points faced by garages," said Robert Merritt, Director of Marketing at Sianty. "Our goal is to provide a solution that is both powerful and simple to use, ensuring garages can run more efficiently and keep their customers happy".

A Platform Built for Real-World Needs

From the very beginning, Sianty's development has been driven by real-world requirements. Every feature is designed to solve a specific problem faced by shop

owners—whether it's reducing the time spent on administrative work, improving billing accuracy, or enhancing customer communication.

The **Garage Management Software** platform brings together everything a modern workshop needs: digital job cards, real-time inventory tracking, automated invoicing, technician performance monitoring, multi-branch control, and integrated customer communication tools. This all-in-one approach eliminates the need for multiple disconnected systems, reducing errors and saving valuable time.

What sets Sianty apart is its commitment to usability. The **garage management system** is designed for both small workshops and larger automotive service providers, making it a versatile solution for businesses of all sizes. The interface is fully bilingual (Arabic and English), and it handles local regulatory requirements like UAE VAT automatically.

Measurable Results for Real Shops

The impact of Sianty's platform is measurable and significant. Workshops that have adopted the system are reporting performance gains that were previously unimaginable. According to Sianty's data, job completion times have been cut from an average of 3.5 days to just 1.8 days—a reduction of nearly 50%. Customer retention rates have climbed from 62% to 87%, billing accuracy has improved from 80% to 99%, and inventory waste has dropped from 18% to 6%.

For shop owners, these gains translate directly to the bottom line. Over 25,000 vehicles have already been serviced using Sianty's platform in the region, proving that it can scale from a single garage to large enterprises. The **workshop management software** capabilities have helped shops reduce administrative hours from 12 hours per week to just 4, freeing up staff to focus on customers rather than paperwork.

One Abu Dhabi garage reported a 40% increase in returning customers and a 35% reduction in parts waste after going digital. These aren't isolated success stories—they

represent a broader trend of shops embracing technology to improve efficiency and build stronger customer relationships. The [garage software](#) platform is the engine behind this transformation.

A Growing Global Network

Sianty's success hasn't gone unnoticed. The company's network of partners and distributors continues to expand rapidly, driving the digital transformation of the automotive repair and fleet maintenance industry across regions. Whether you're an independent garage, a multi-branch service center, or a commercial fleet operator, Sianty's scalable platform adapts to your needs.

The [Fleet Management Software](#) module addresses the growing demand for commercial fleet solutions, enabling shops to manage multi-vehicle accounts efficiently, track maintenance schedules across entire fleets, and generate consolidated billing. This capability has opened doors for shops serving business clients who demand reliability and transparency.

Innovation That Keeps Pace with the Industry

The auto repair industry is changing rapidly. Electric vehicles, connected car technology, and shifting consumer expectations are reshaping the market. Sianty is committed to innovation that keeps pace with these changes. The platform evolves continuously, adding new features and capabilities that help shops stay ahead of the curve—from AI-powered scheduling to predictive maintenance and advanced analytics.

Join the Sianty Community

Thousands of garages have already made the switch to Sianty. They're running smarter operations, serving customers better, and building more profitable businesses. Whether

you're a single-bay workshop or a multi-location enterprise, Sianty has the tools you need to succeed.
